YouTube

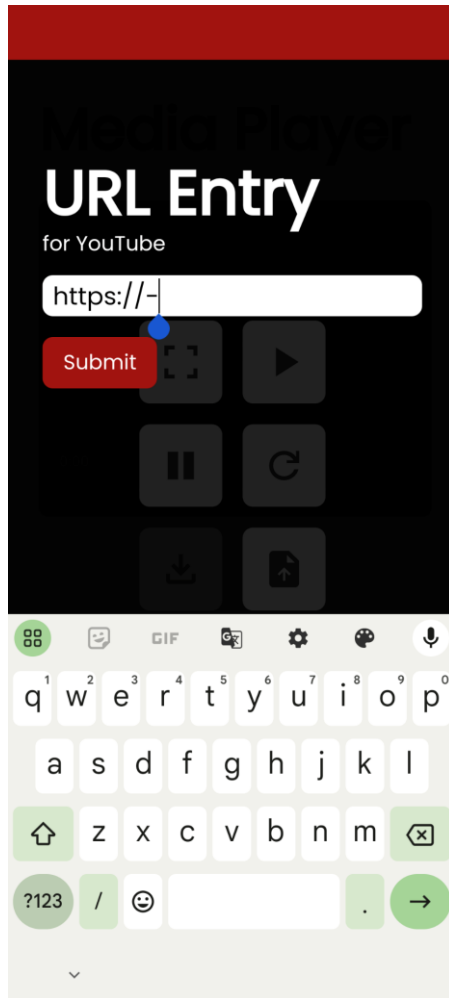

Various playback control  
options are shown here.

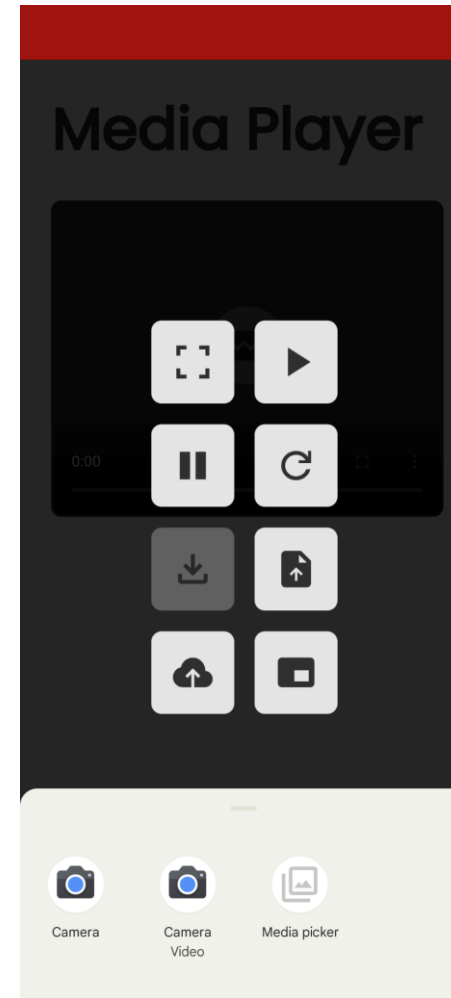

Video upload from device

Picture-in-Picture (PiP)

# Mobile Android

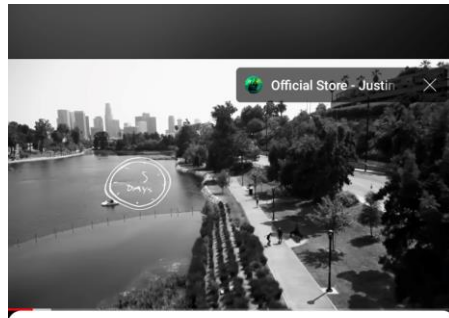

URL entry for YouTube videos. Commonly occurring YouTube URLs are supported.

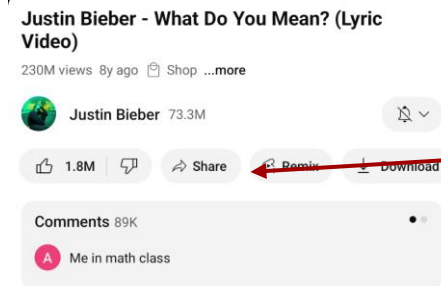

Video upload from device. (only '.mp4', '.webm' & '.ogg' files are supported).

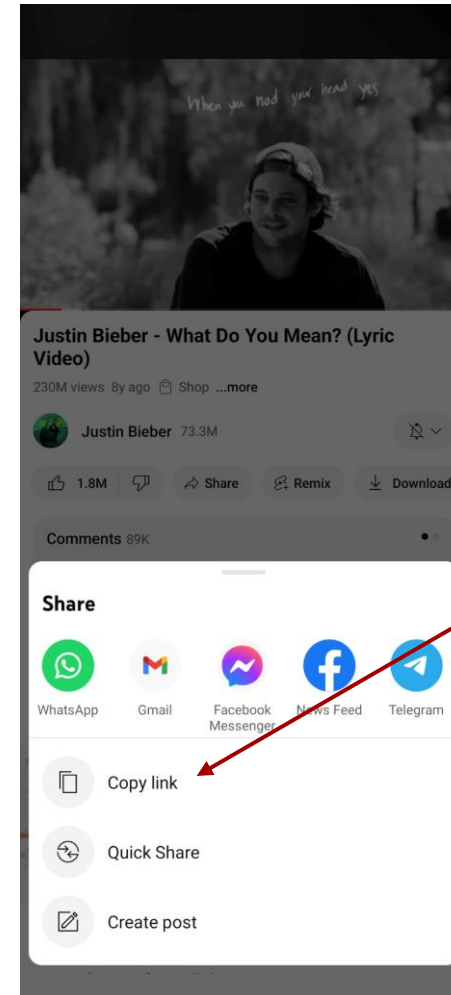

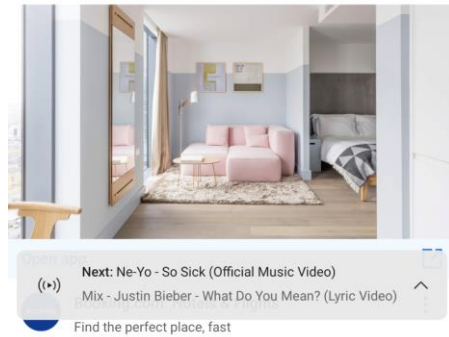

# Mobile Android

Play any video on the YouTube app.

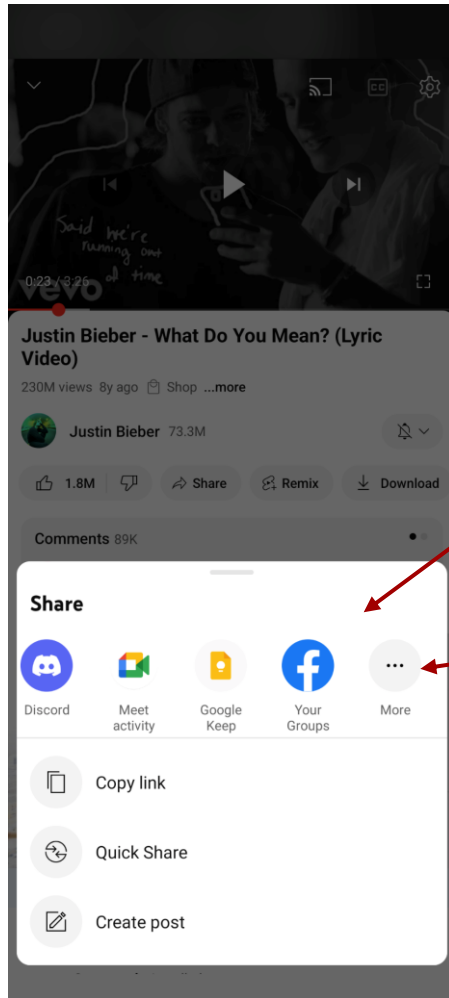

Click on the 'Share' button.

Copy the playback link to Media Player's URL upload feature.

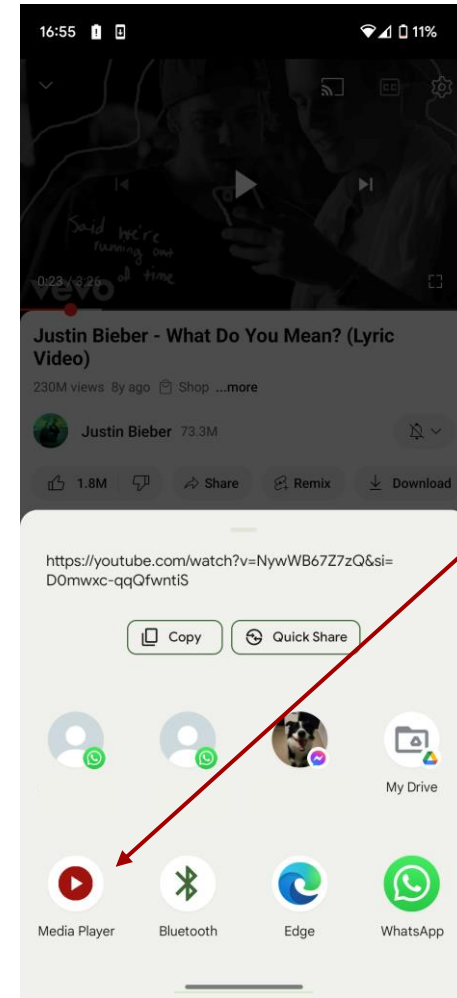

OR...

# Mobile Android

Horizontally scroll across the list of options.

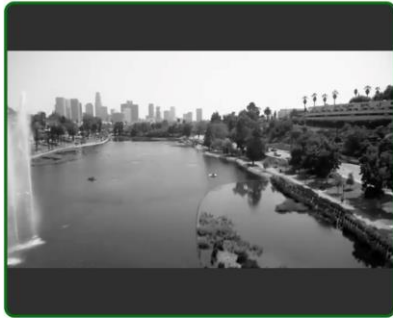

Access more options.

Find the Media Player app on the list of options.

# Mobile Android

## Media Player

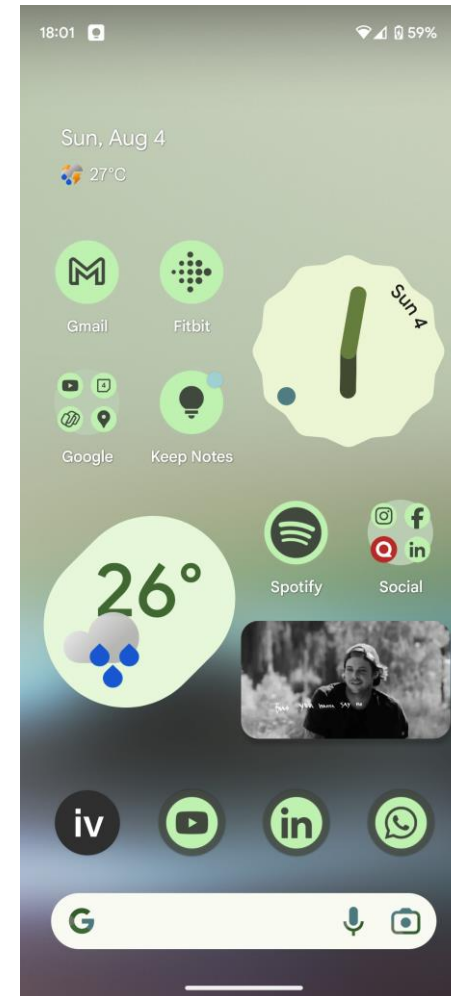

The video playback loads up on Media Player.

Apply gesture interaction (by touch or click). Ensure that playback perimeter status remains 'green' for PiP mode.

Exit the app by accessing the home screen directly.

Video playback automatically starts on PiP mode (only if it remains running when PiP was requested).

# Mobile Android / Desktop

Ensure that all relevant PiP settings have been enabled on your device, including permissions and privacy controls.

Playback uploads are limited to a maximum of 200 universal calls per day, due to the heavy restrictions and bandwidth control put upon by YouTube servers. URL uploads may not work if this threshold has been exceeded.

On supported devices, background play may be manually initiated if a playback widget from the app appears in the notifications panel (or other similar locations).

Due to CORS policies, Google Ads are automatically disengaged from any playback within the app.

The uploading of non-YouTube URLs is unsupported.
